DIGITAL LITERACY PORTFOLIO

PROJECT REPORT

Name: Chirag Malviya.
Registration No.: 25MIB10053.
Branch: Int. M.Tech in AI and Bioinformatics.
Year: 1st year.
Course Code: CSE0001 Digital Literacy.
Date: 31/03/2026.

INTRODUCTION

This project was undertaken as part of the Digital Literacy course, where I assumed the role of a Student Digital Ambassador. The objective of this project was to understand and promote digital literacy among students by exploring various digital tools, platforms, and online communication practices.

The project consists of five tasks, each focusing on a different aspect of digital literacy, including awareness creation, professional portfolio development, coding and collaboration tools, email etiquette, and cybercrime awareness.

Through this project, I gained hands-on experience in using platforms like GitHub, LinkedIn, and Google Workspace. It also helped me understand the importance of maintaining a professional online presence and practicing safe and responsible behavior in the digital world.

TASK 1: DIGITAL LITERACY INFOGRAPHIC

I created my digital literacy infographic using Canva, an easy-to-use online design platform. The infographic focuses on key aspects of digital literacy such as safe internet practices, professional online presence, and useful digital tools for students.

The design includes important points like using strong passwords, avoiding suspicious links, maintaining privacy, and building a professional profile on platforms like LinkedIn. I used icons, colors, and structured sections to make the infographic visually appealing and easy to understand.

The goal of my design was to spread awareness among students in a simple and engaging manner. One challenge I faced was balancing the amount of information and visual design, as too much text made the infographic cluttered. I learned how to present information concisely using visuals, which improved my design and communication skills.

TASK 2: DIGITAL PORTFOLIO

For this task, I created and updated profiles on GitHub, LinkedIn, and HackerRank. These platforms are widely used for building a professional digital presence. GitHub is used to showcase coding projects and repositories, LinkedIn is a professional networking platform, and HackerRank helps in improving coding skills.

On GitHub, I created a profile README that includes my academic details and learning goals. On LinkedIn, I updated my education details including my degree and expected graduation year. These profiles help in creating a professional identity that can be accessed by recruiters and academic professionals.

Over the next four years, I plan to actively update my GitHub with projects, build connections on LinkedIn, and regularly practice coding problems on HackerRank. This will help me enhance my technical and professional skills while improving my career opportunities.

TASK 3: CODING & COLLABORATION PLATFORMS

In this task, I explored coding and collaboration platforms. I used HackerRank to solve a beginner-level coding problem, which helped me understand basic programming logic and problem-solving techniques. It also introduced me to how coding platforms evaluate solutions using test cases.

For collaboration, I created a Google Form titled “Digital Literacy Awareness Quiz” with five questions. The form included both multiple-choice and short-answer questions. I also connected the form to a Google Sheet to view and analyze responses.

These tools are highly useful in academics, as coding platforms help in developing technical skills, while Google Workspace tools allow easy collaboration, data collection, and analysis. As a Digital Ambassador, I can use these tools to create interactive learning experiences for students.

TASK 4: EMAIL ETIQUETTE

Poor digital communication can lead to misunderstandings and missed opportunities. For example, if a student sends an email without a proper subject line or uses informal language, it may create a negative impression or be ignored by the recipient.

In professional environments, clear and respectful communication is very important. Using proper greetings, structured content, and polite language ensures that the message is understood correctly.

This task helped me understand the importance of email etiquette and how small mistakes in communication can create problems. By following proper guidelines, such situations can be easily avoided, leading to effective and professional communication.

TASK 5: CYBERCRIME AWARENESS

While researching cybercrime, I found it surprising how easily phishing attacks can deceive people using simple techniques like fake emails and urgent messages. Many users fall victim because they are unaware of these tactics.

This task helped me understand the importance of being cautious while using digital platforms. Cyber threats are increasing, and awareness is the first step to prevention.

One habit I will change is verifying links and messages before clicking on them, especially when they involve financial or personal information. Staying alert and following basic safety practices can help prevent cybercrime.

CONCLUSION

This project provided valuable insights into digital literacy and its importance in today's world. It helped me understand how to use digital tools effectively, maintain a professional online presence, and communicate responsibly.

I also learned about cyber safety and how to protect myself and others from online threats. Overall, this project enhanced my technical, communication, and awareness skills, which will be beneficial for my academic and professional growth.
